Occupational Health and Safety in Hotels

University Project / Professional Training

PRESENTER • NOVEMBER 1, 2026

Safety is a system, not a slogan

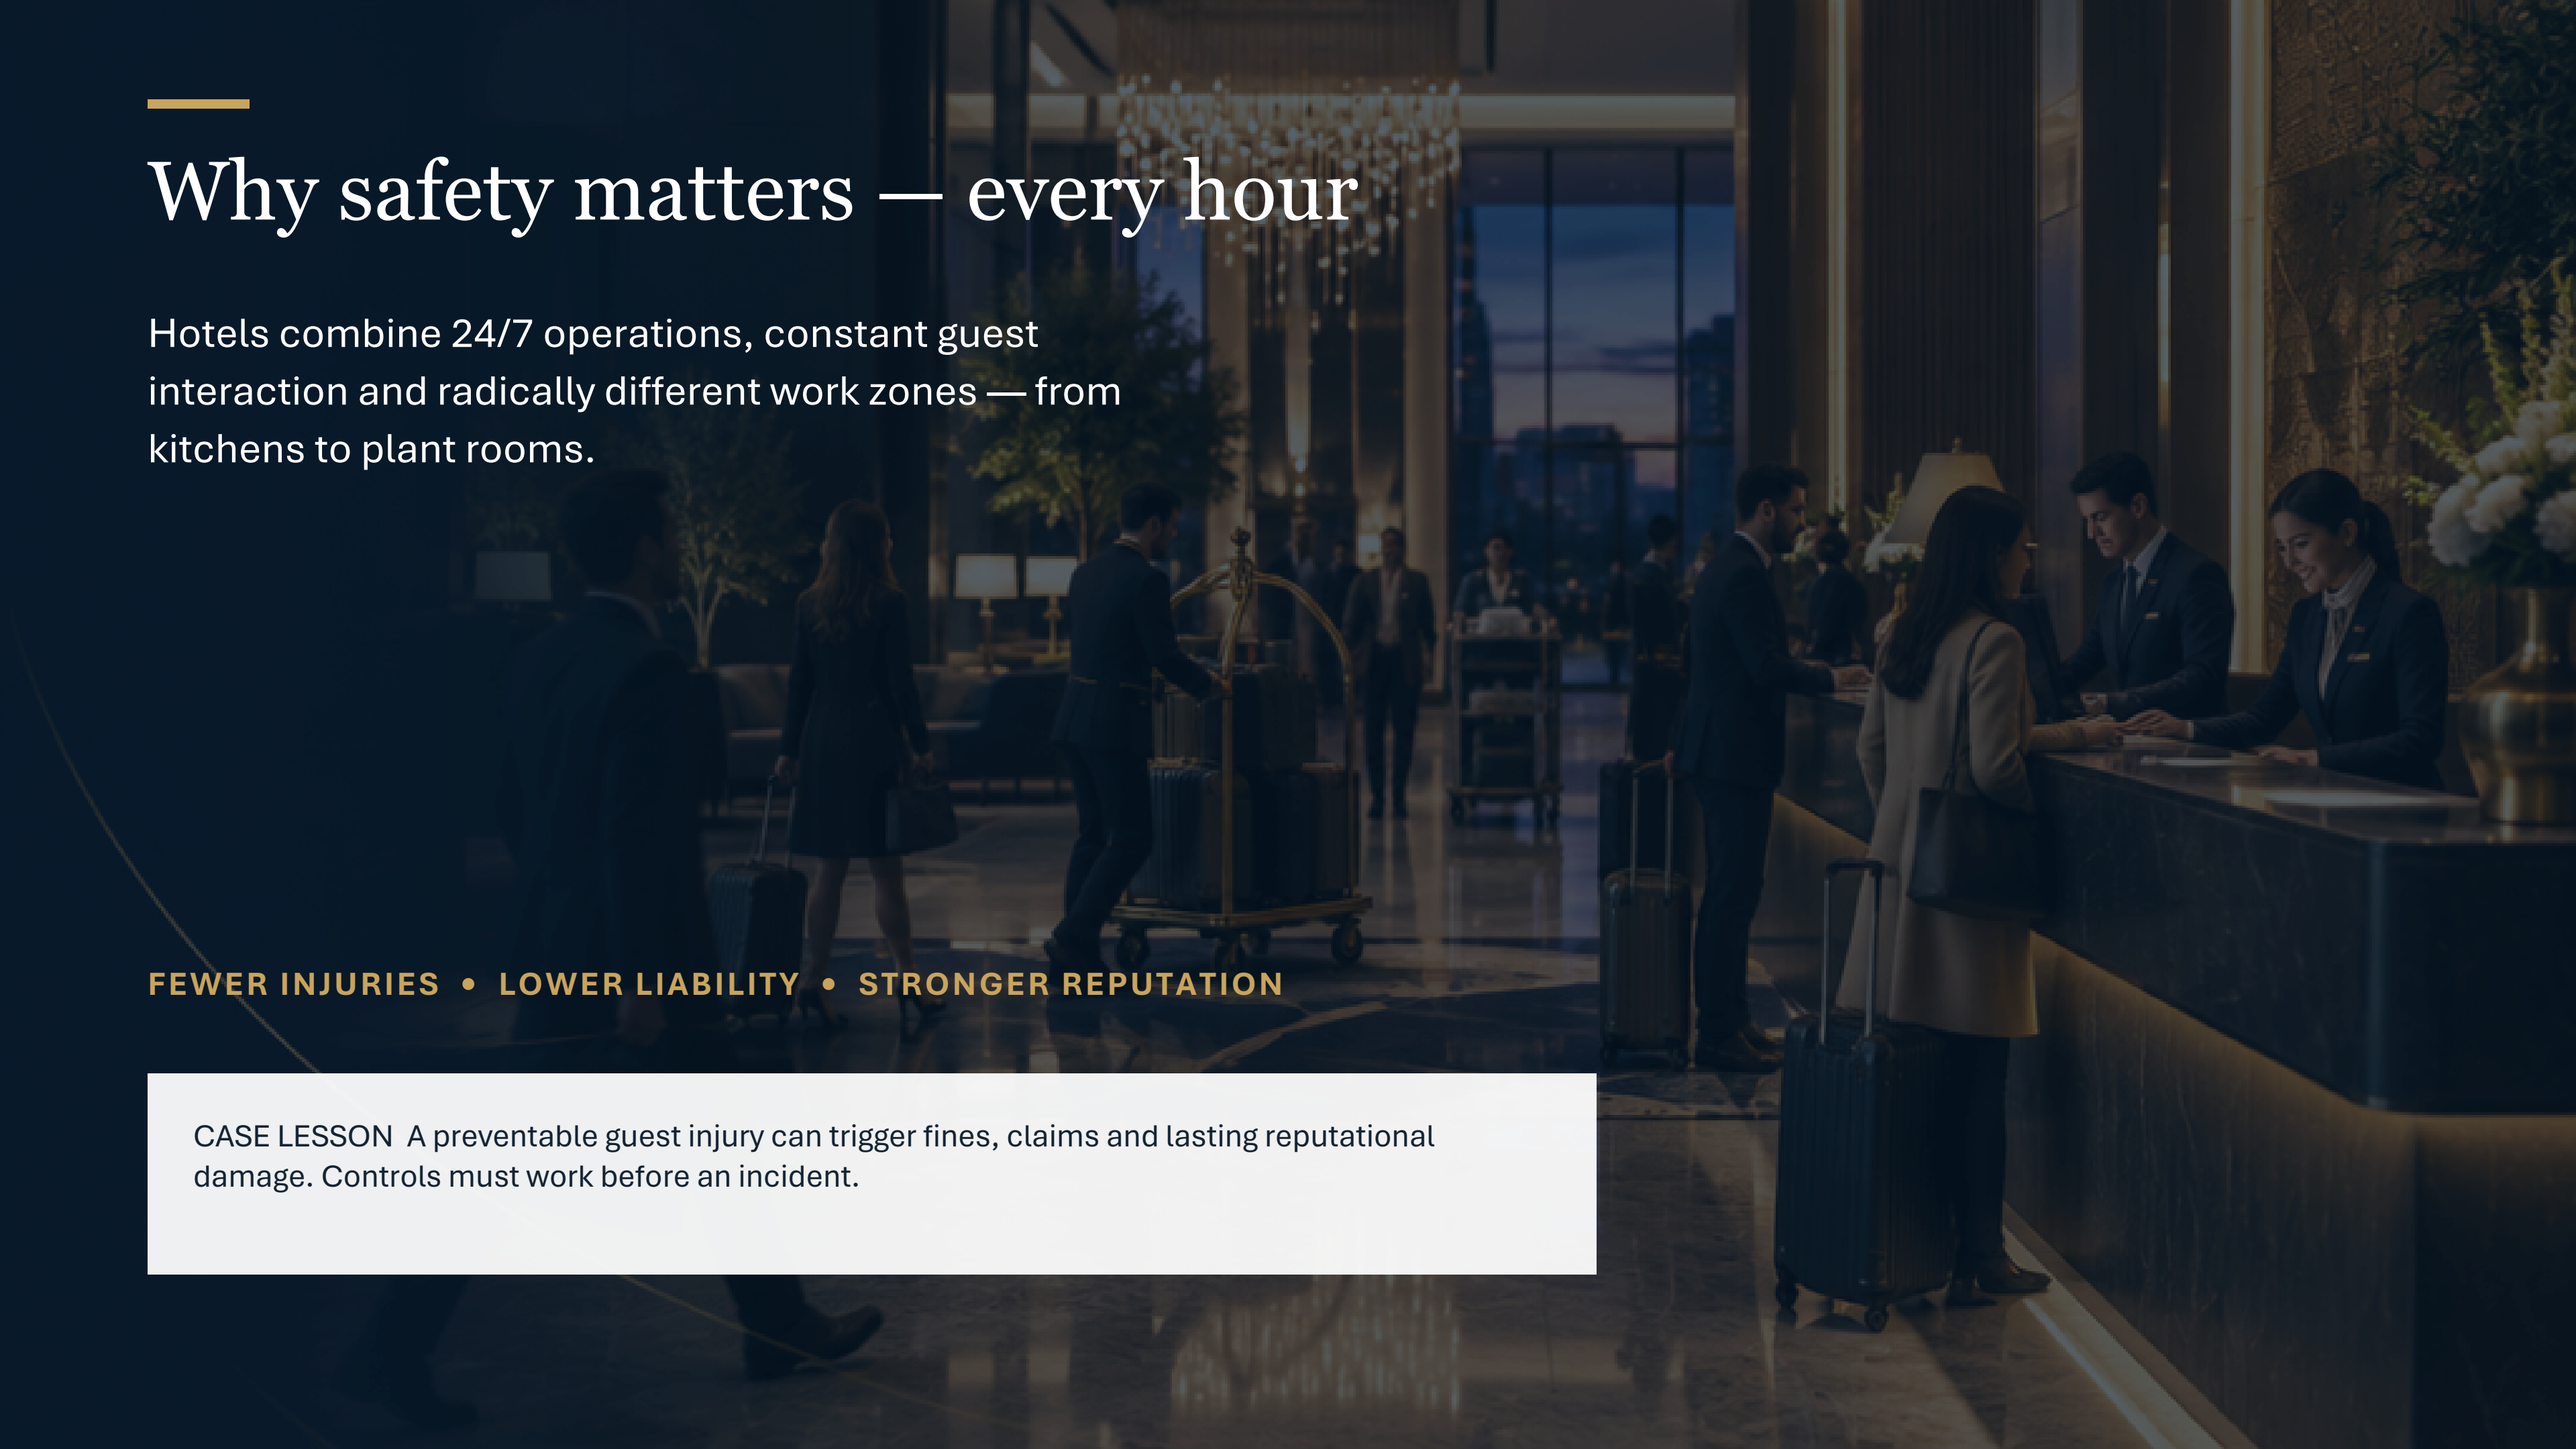

Occupational Health and Safety (OHS) is the coordinated practice of anticipating, controlling and responding to risks that may affect employees, guests or hotel property.

Shared duty: management sets the system; every employee applies it.

Why safety matters — every hour

Hotels combine 24/7 operations, constant guest interaction and radically different work zones — from kitchens to plant rooms.

FEWER INJURIES • LOWER LIABILITY • STRONGER REPUTATION

CASE LESSON A preventable guest injury can trigger fines, claims and lasting reputational damage. Controls must work before an incident.

Four hazard families. One shared standard.

PHYSICAL

Slips, trips, falls and lifting injuries

FIRE

Kitchens, wiring and hot equipment

CHEMICAL

Cleaning agents and pool chemicals

SECURITY

Guest, staff and property concerns

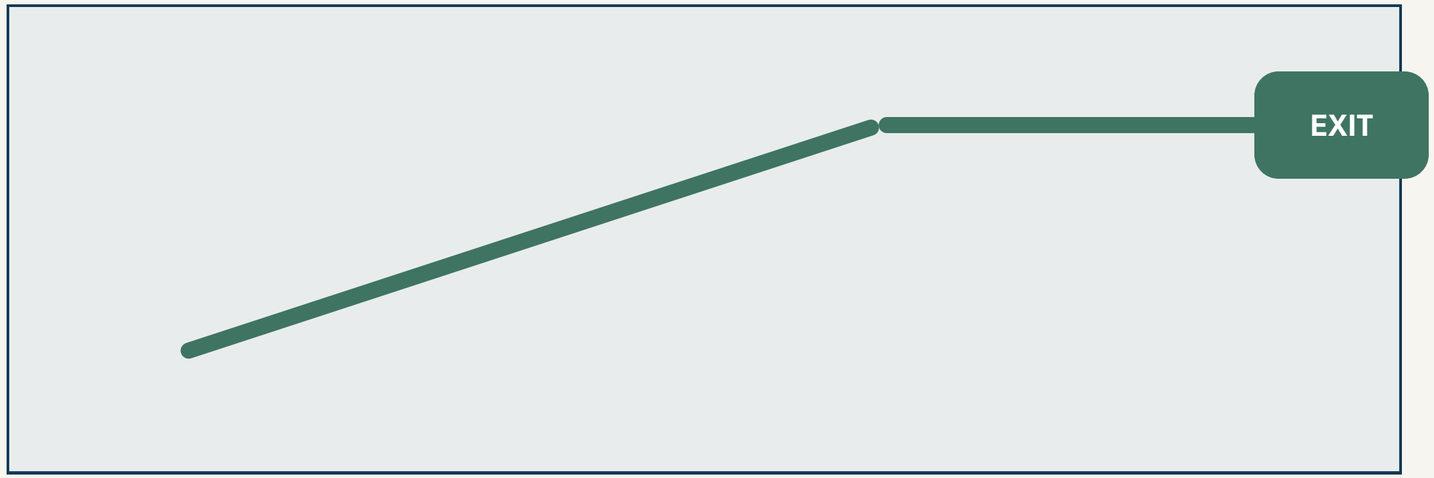

Detect. Direct. Evacuate. Account.

ALARM
Confirm & notify

DIRECT
Guide nearest safe route

EVACUATE
No lifts; assist guests

ACCOUNT
Meet at assembly point

Successful evacuations depend on practiced staff roles, visible routes and a verified assembly-point headcount.

Kitchen safety is precision

Maintain equipment. Separate raw and ready-to-eat food. Control time and temperature. Use guards, dry grips and clear call-outs around heat and blades.

HEAT
Use dry PPE

SHARP
Cut away

CLEAN
Prevent cross-contact

Chemical safety: control every handoff

01

LABEL

Keep original labels legible

02

STORE

Separate incompatible products

03

DILUTE

Use the approved ratio only

04

CHECK SDS

Know exposure and first-aid steps

INCIDENT LESSON

Mixing incompatible cleaning agents can release toxic gas. Never improvise: stop, isolate, ventilate and follow the SDS emergency response.

Stop the most common accident

1 Dry spills immediately

2 Keep routes clutter-free

3 Require non-slip footwear

4 Use signs and barriers

Electrical safety starts before switch-on

INSPECT

Cords, plugs and housings

OPERATE

Dry hands; correct appliance

LOAD

Never overload outlets

ISOLATE

Tag faults; qualified repair only

FAULTY WIRING → HEAT BUILD-UP → IGNITION

Secure — without feeling closed

Control staff-only zones and key access. Stay observant while preserving warm guest service. Escalate suspicious behavior discreetly and use established protocols for intruders, missing persons or medical emergencies.

VERIFY • OBSERVE • ESCALATE • DOCUMENT

The first minutes matter most

1

ASSESS

Scene safety and responsiveness

2

ALERT

Call emergency services and supervisor

3

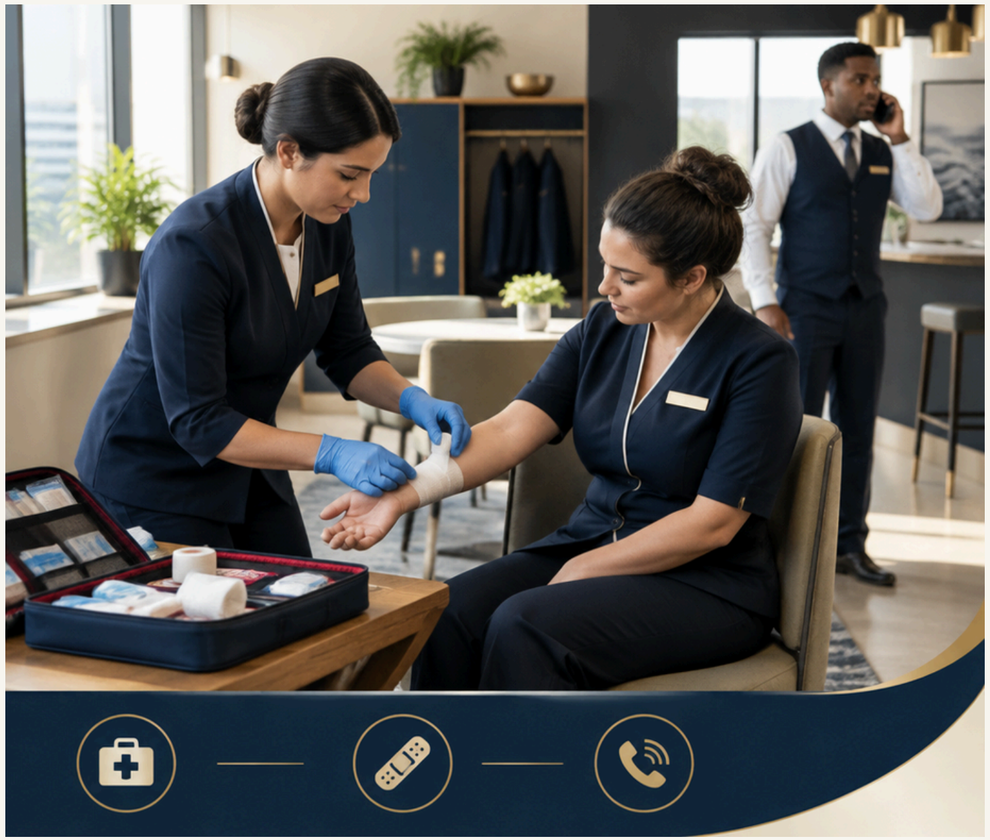

ASSIST

First aid or CPR within training

4

REPORT

Record facts and restock kit

The right PPE for the task

KITCHEN

Cut-resistant glove • apron

HOUSEKEEPING

Gloves • mask • non-slip shoes

MAINTENANCE

Eye protection • task gloves

Train for the moment before it arrives

Build competence through a repeating cycle — not a one-time induction.

LEARN
Induction + refreshers

PRACTICE
Drills + simulations

REPORT
Hazards + near misses

IMPROVE
Feedback + action

A practical operating rhythm

EVERY SHIFT

- ✓ Walk routes and work areas
- ✓ Confirm exits remain clear
- ✓ Brief unusual risks

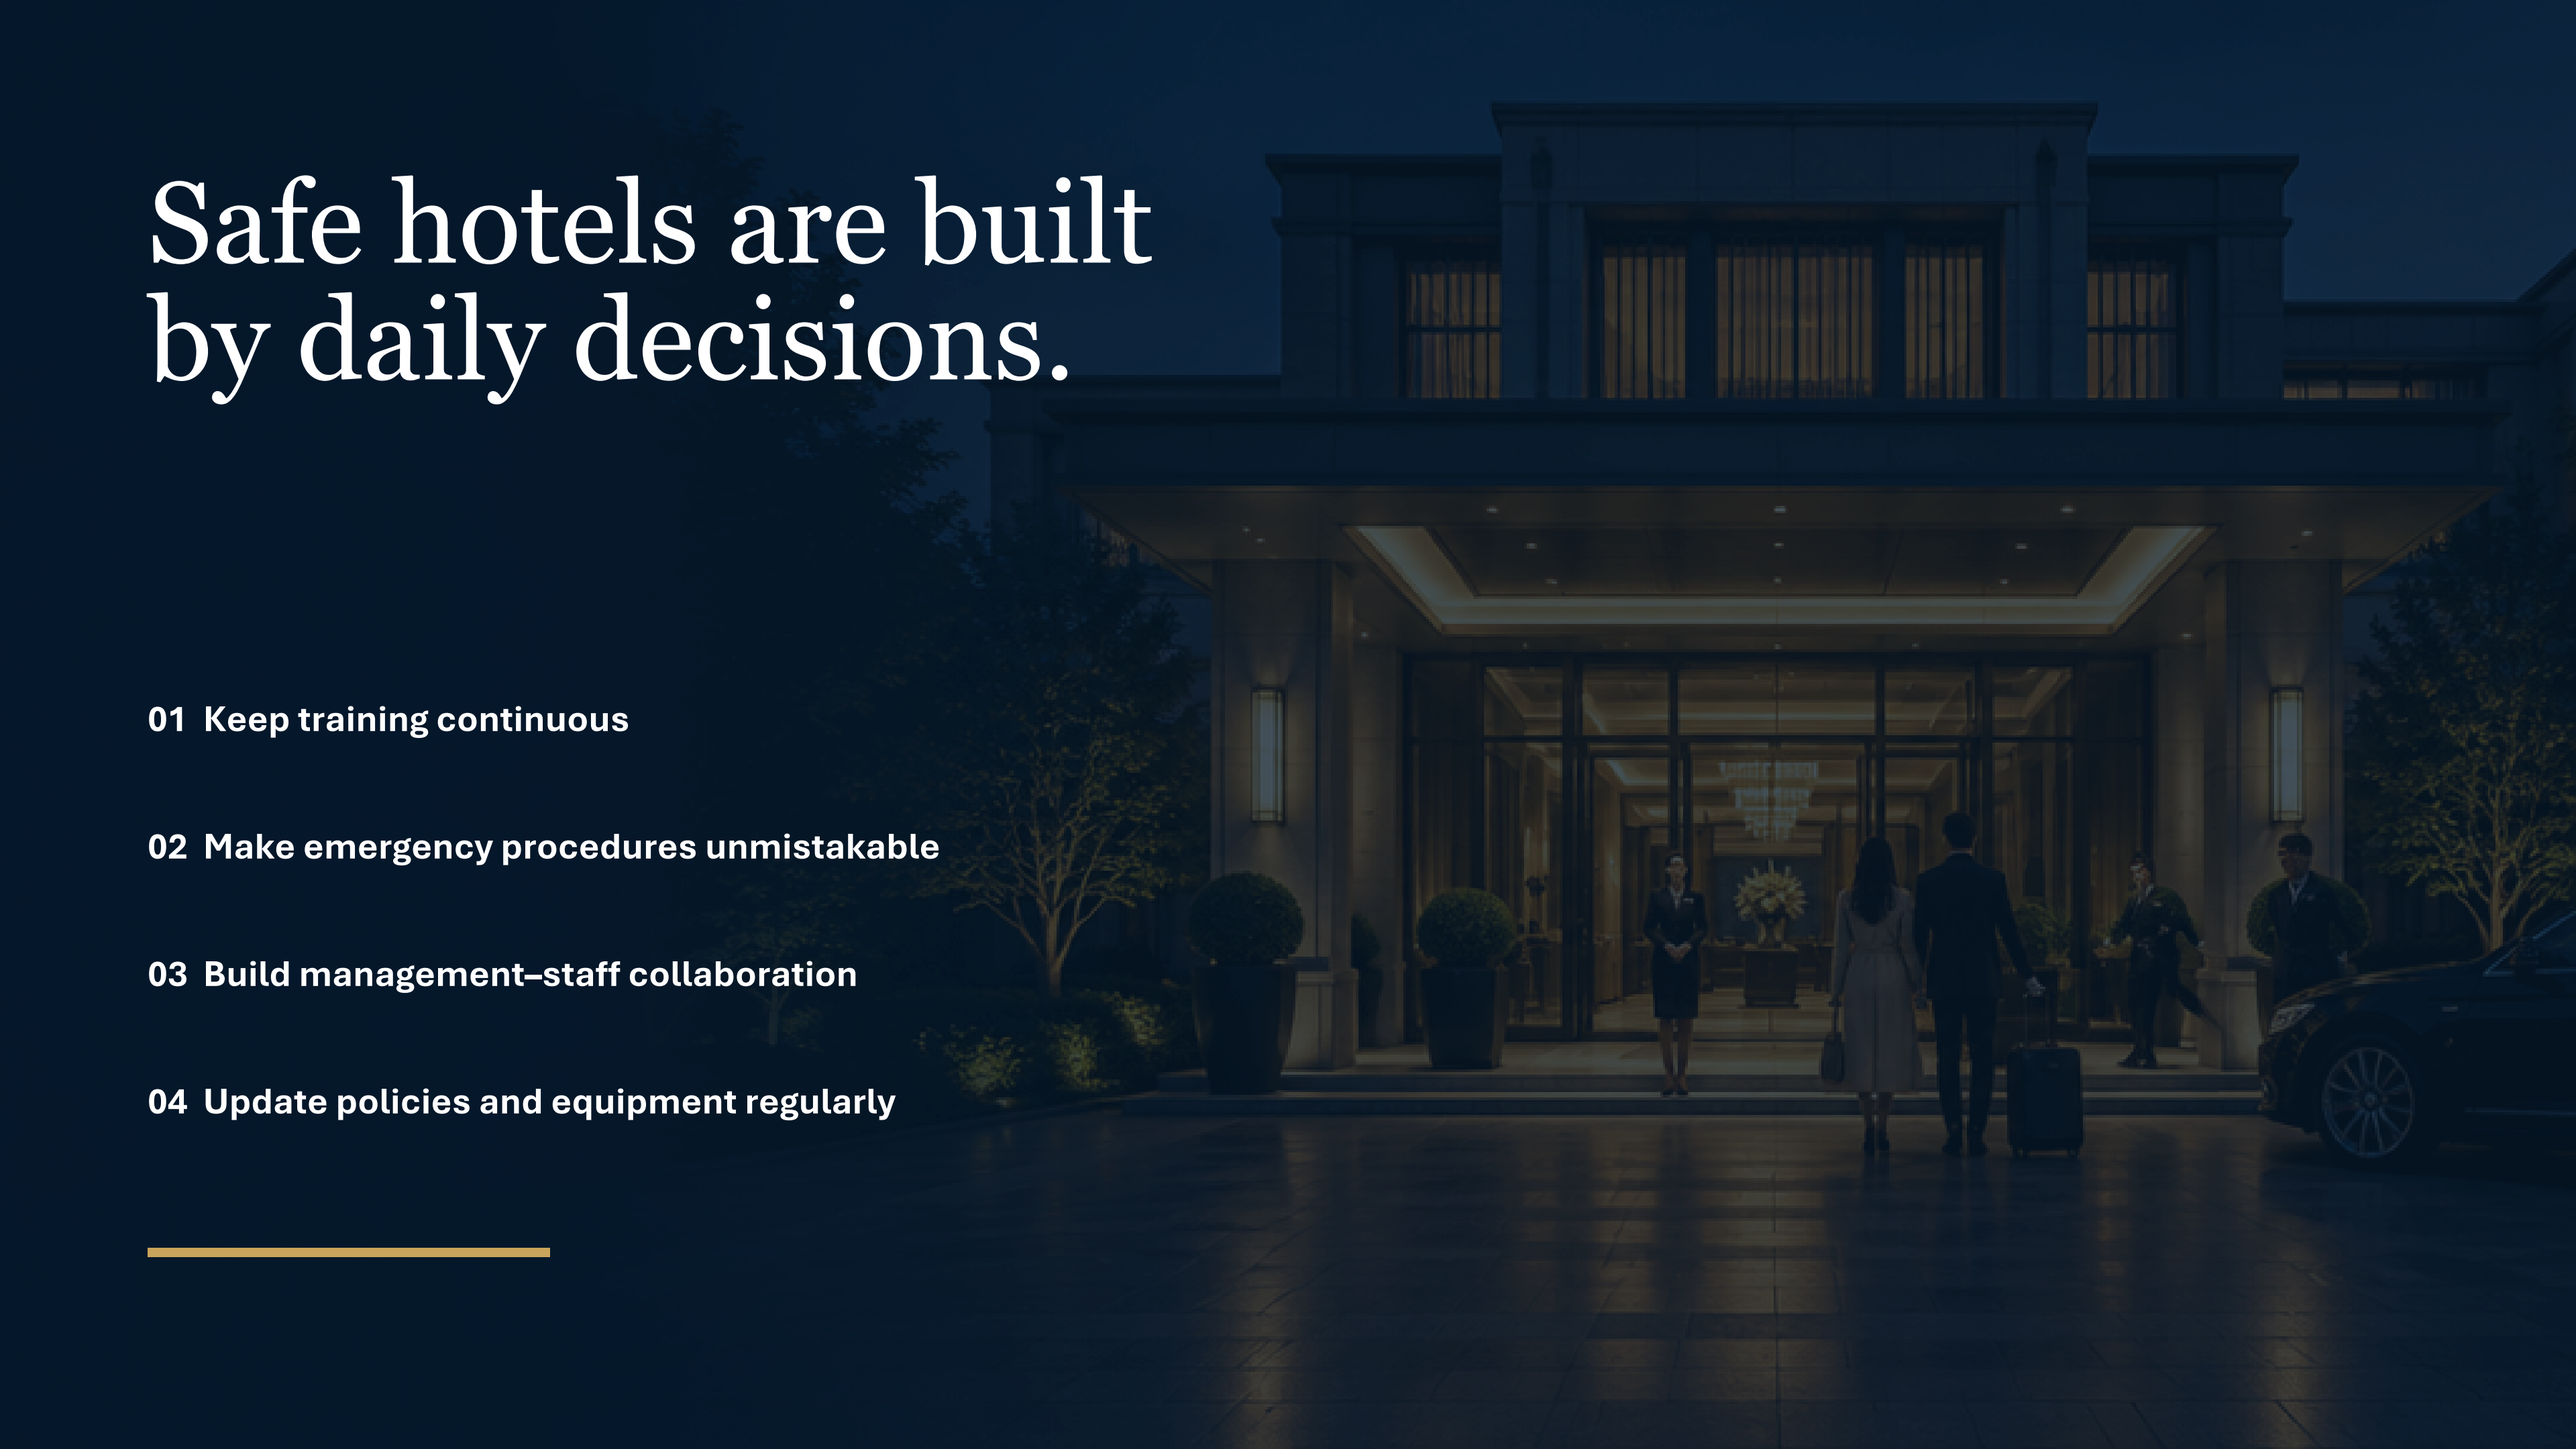

EVERY WEEK

- ✓ Check equipment and logs
- ✓ Review signs, kits and PPE
- ✓ Close reported actions

AFTER ANY INCIDENT

- ✓ Care for people first
- ✓ Preserve facts and report
- ✓ Investigate; update controls

Safe hotels are built by daily decisions.

01 Keep training continuous

02 Make emergency procedures unmistakable

03 Build management–staff collaboration

04 Update policies and equipment regularly
